### **DETAILED ACTION**

1. The indicated allowability of claims 45 and 48-50 is withdrawn in view of the newly discovered reference(s) to Atia. Rejections based on the newly cited reference(s) follow.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 40, 41, 45, and 48-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Atia.

Atia teaches a filter (Figs. 2, 2a) including: a housing (80) has cavities for individual resonator stages; a circuit board (10) has traces (e.g. 32) and interstage coupling traces (e.g. 70) (Claims 49, 50); the circuit board covers the opening in the

Art Unit: 2817

housing cavity; the circuit board has input/output connectors (20, 30) coupled to the filter cavity; and the filter can be used with satellite transponders.

However, Atia does not explicitly teach that the filter traces are coupled to an electronic component (Claims 45, 48), or that the electronic component includes a power amplifier circuit (Claims 40, 41).

It would have been considered obvious to one of ordinary skill in the art to have provided a well-known electronic power amplifier coupled to the filter and its traces, because conventionally satellite transponders such as taught by Atia use electronic power amplifiers for providing a useful power level for the transmission of communications signals, thereby suggesting the obviousness of such a modification.

***Response to Arguments***

5. Applicant's arguments with respect to claims 40-41, 45, and 48-50 have been considered but are moot in view of the new ground(s) of rejection.

***Allowable Subject Matter***

6. Claims 6-7, 13-16, and 47 are allowed.
